

Item description

WAGO-I/O-CHECK is an easy-to-use Windows application for checking inputs and outputs and displaying a WAGO I/O System 750 node.

The software reads the configuration from the node and displays it as a graphic on the screen. The graphic can be printed together with a configuration list as documentation.

With WAGO-I/O-CHECK, it is possible to display and determine the process data of the I/O modules. The field wiring, including all sensors and actuators, can thus be checked before startup.

Application-specific settings, such as the baud rate or type of sensors, can be made using certain interface, Pt100 and thermocouple modules.

The coupler must be connected at a vacant serial or USB port of the PC using the communication cable supplied in the set with the system to enable communication between WAGO-I/O-CHECK and the coupler.
