## Item description

Talk to us about the successor to this item.

The TO-PASS® Modem for industrial ETHERNET networks unites GPRS/EDGE wireless modem, VPN (Virtual Private Network) router and firewall in a single device. Highly sensitive data can thus be transmitted wirelessly and securely via the GSM network.

The integrated firewall also extensively protects the application against unauthorized access, providing maximum security and flexibility.

Intelligent communication management ensures stability and high availability of the connection. This in turn enables easy integration of remote stations into an IP network.

- VPN protocol: IPSec (tunnel and transport mode)

Subject to changes. Please also observe the further product documentation!
